## CAREER OBJECTIVE

Full stack developer with 1+ year of hands-on experience building secure, scalable REST APIs with Core Java, Spring Boot and JPA/Hibernate. Works across the Spring ecosystem — Spring Boot, Spring MVC, Spring Data, Spring Security — with JWT-based API authentication and relational database development in MySQL. Comfortable with code review, Maven, Git and builds the React front ends that consume the APIs.

## CORE FUNDAMENTALS

- Core Java: **OOP**, **Collections**, **Exception Handling**, **Multithreading**.
- Data Structures & Algorithms: **Arrays, Linked Lists, Stacks, Queues, Trees, Sorting & Searching**.
- RESTful API design, layered architecture, API-first approach.
- Relational database schema design, SQL query writing, and JPA/Hibernate ORM mapping.
- Secure coding practices, JWT authentication, and role-based authorization.

## SKILL SUMMARY

- Programming: Java (Core Java, OOP), SQL, JavaScript, C++
- Backend & APIs: Spring Boot, Spring MVC, Spring Data JPA, Spring Security, Hibernate.
- Databases: MySQL, PostgreSQL.
- Frontend: React.js, JavaScript, HTML5, CSS3.
- Frameworks/Tools: RESTful APIs, JDBC, JWT Authentication, Microservices
- Developer Tools: Maven, Git, GitHub, Postman, Eclipse, IntelliJ IDEA, VS Code
- Soft Skills: Communication, Code Review, Task Prioritization.

## WORK EXPERIENCE

**Software Developer –** *Patel Retail Limited, Mumbai* *Apr 2026 – Present*

- Design, develop and maintain Java applications end to end — REST API layer, data access and user-facing screens — for internal MIS and reporting used across the business.
- Build and consume RESTful APIs following an API-first approach, applying layered enterprise design with clear controller, service and repository separation and consistent error handling.
- Participate in code review, apply feedback, and work with business stakeholders to define requirements and integrate solutions with existing systems.
- Follow secure coding practices when handling internal operational and financial data.

**Java Full Stack Engineer (Intern)** | *Softech IT Solution, Remote* *Jul 2025 – Feb 2026*

- Built full stack features in Core Java, Spring Boot and React.js, connecting component-driven UIs to RESTful backend endpoints.
- Implemented the persistence layer with JPA/Hibernate and Spring Data, including mapped entity relationships and transaction-scoped service methods.
- Secured API endpoints using Spring Security with JWT authentication and role-based authorisation.
- Applied microservices principles to service boundaries and REST-based inter-service communication.
- Used Maven for builds and Git/GitHub for branching, pull requests and version control in an Agile remote team.

## PROJECT EXPERIENCE

**Electricity Bill Management System** *2025*

*Technologies: Java, Spring Boot, Spring Security, JPA/Hibernate, MySQL, JWT, React.js*

- Built a Spring Boot application exposing JWT-secured RESTful APIs over a MySQL schema through JPA/Hibernate.
- Implemented role-based dashboards giving administrators and consumers entirely separate capabilities.
- Developed bill generation, payment recording and history retrieval as validated REST endpoints with structured error responses.
- Enforced authorisation server-side at the API layer rather than in the UI; verified every endpoint in Postman.

## EDUCATION

**Bachelor of Computer Applications (BCA)** *2021 – 2024*

Sinhgad Institute, Pune — CGPA: 7.76

## CERTIFICATIONS

- **Java Full Stack Development** — SEED Infotech, Pune | Core Java, Spring Boot, Hibernate, REST APIs, React.
- **Java Masterclass** — Udemy (Certificate ID: UC-9912a22c-14f7-430b-80c6-97014fd3eaf).
